Competition and Restructuring the American Research University

Introduction to the Data

This marks the eighth edition of the *Top American Research Universities*. A primary principle of this enterprise has always been and remains the production of nationally available data, compiled in a standardized format, made available free online for further analysis by colleagues, and presented without elaborate statistical manipulations. While there may be value in complex analyses of data on university performance, in many instances these studies create more problems than they solve. Moreover, by presenting the actual data, different audiences can use the information for different purposes. An example of how these data may be used appears on our website with the new Data Viewer. This tool is a downloadable Excel spreadsheet that provides multiple ways of viewing the nine measures that have served as the primary indicators for the *Top American Research Universities*. The user can identify one institution, and the Viewer displays that institution's data in a variety of graphical formats over a five-year period. Users can also identify and display the performance of one institution against a cohort of up to fifteen institutions for the nine indicators. The viewer shows the overall national ranking as well as ranking by public or private control for the primary university selected and charts change on the various indicators over time. This tool gives institutions a comparative perspective on their performance relative to the marketplace as a whole or a specific cohort of institutions.

The website also continues the practice of providing data on all universities reporting federal research expenditures (some 659 institutions), along with a variety of other tables with data on institutional characteristics. We have updated the table that presents the federal research expenditures of universities with and without the amounts attributable to AAMC-reporting medical schools. This gives an interesting perspective on the non-medical school research base of institutions and improves the ability to select appropriate comparison groups.

This year, we have changed the cut-off point for inclusion in the printed edition of the *Top American Research Universities*. Originally, we set \$20M in annual federal research expenditures as the minimum for inclusion. The volume of federal research support increased over the years since we established this baseline and the purchasing power of \$20M declined from inflation, and we decided to reset the minimum cutoff point at \$40M. The universe included in this classification of top American research universities totals 156 institutions, 108 public and 48 private. These 156 institutions account for about 90% of all reported, academic federal research expenditures.

As always, we report the data in our tables on single campus institutions, disaggregating multi-campus systems into their component university campuses. Although this process continues to cause some controversy among institutions that prefer to report the aggregate research productivity of multi-campus systems, we continue to believe that the primary responsible entity for research performance remains the individual university campus.

University Ranking

The process of ranking universities continues as a popular and controversial effort on a national and international scale, and the proliferation of rankings of all types has sometimes improved our understanding of research university competition and at other times provided considerable entertainment. The most profitable rankings of all, the major issues prepared by *US News & World Report*, have continued their remarkable success as a commercial enterprise, multiplying ranking groups, revising and sometimes improving the methodology, and serving as a reference point for many audiences interested in identifying the "Best" American colleges and universities in various categories.

Recognizing the popularity of this commercial juggernaut, others have entered the for-profit rankings business. One, sponsored by a for-profit academic enterprise, promises to provide detailed comparisons using sophisticated analysis of disciplinary performance, although without the transparency of data that would permit independent verification.

Other rankings, more akin to the US News variety, seek to bolster general interest publications with rankings of domestic and international universities. Indeed, the ranking of international universities, called by their British term of league tables, has become a major enterprise in its own right, with the *World University Ranking*, *Times Higher Education Supplement* as prime examples. The popularity of the Chinese *Shanghai Jiaotong University Academic Ranking of World Universities* rankings, a non-commercial enterprise, clearly demonstrates the international popularity of ranking lists. (See the excellent summaries of ranking systems at (<http://www.ihep.org/Research/rankingsystemsclearinghouse.cfm> and <http://www.library.uiuc.edu/edx/rankings.htm>)

The international rankings suffer from the common problems of all general purpose rankings: inconsistencies of data and imprecision of definitions. Few countries produce easily comparable data on university performance, and most international rankings find themselves limited to counts of publications, citations, and internationally visible scientific prizes. While these may be useful measures of some forms of research productivity and institutional distinction, the validity of linking publication and citation counts by author to the distinction of universities is questionable. Even with the greatest care in the selection of publications and the statistical processes used to count and verify authors and citations, these surveys often misrepresent quantity for quality. They may misidentify some significant authors and often ignore the different publication styles and citation conventions of various disciplines and journals. These problems can render such rankings difficult to interpret.

In the United States, the National Research Council's long awaited survey of graduate programs continues to struggle with data definitions, statistical issues associated with calibrating the data collected, and a concern that the resulting effort will be out of date when published and overly reliant on reputational issues that have long plagued *US News* and similar survey based rankings.

From our perspective, all of this activity in the ranking world is good news even when we are not always enthusiastic about the results. Most rankings have some value for some observers interested in some characteristics of higher education institutions. No ranking, including this one, provides a holistic picture of the full value or total

quality of any institution in all of its many manifestations. Universities serve many audiences, and the endless and foolish search for a universal ranking that will consolidate into one number the many virtues of institutions of substantially different characteristics and value to each of their wide variety of constituencies consumes too much time and energy with too little result. Some universities may well be good at everything, some exceptional at some things and not so good at others, and some not engaged in the national or international competition at all. The pursuit of a single number to represent excellence in these consolidated rankings, whether *US News* or the *Times World University Ranking*, generates a set of false expectations and beliefs.

If we imagine that the annual changes in university rankings highlighted by such publications reflect a real change in university performance, we can find ourselves engaged in a self-defeating effort to manipulate the data to make us look better than we are. We can find ourselves pursuing the false god of ranking instead of the true goal of institutional improvement in a specific and definable way. When, as is the case with *US News*, the vaguely defined notion of reputation becomes a significant factor in the rankings, we can find ourselves spending money on advertising to raise our name recognition among those who vote in the surveys instead of investing in the real work of the university. We can imagine that our football or basketball success, which creates endless publicity, is a good substitute for the work of the faculty and students in the academic enterprise that receives much less attention.

Similar misuse of these publications can mislead us. We might believe that an increase in rank indicates a real improvement rather than a statistical fluke related to complex calculations in the system or the consequence of our immediate competitors having a bad year. We might fool ourselves into thinking we have actually improved when in fact we only benefited from a numerical anomaly.

Most academics know all this, but their public audiences do not always understand or care. They want to see their college or university rise in the published, highly advertised rankings. Especially in the public sector, alumni and friends of the institution will pressure their legislatures, their boards of trustees, and their administrators to insist on following the annual rise and fall in the rankings appearing in one of these popular publications as if they represented

real improvement. This attitude produces much celebration when a small and fundamentally irrelevant positive change in rankings occurs.

No sensible administrator of a public university will argue that the Ranking Has No Clothes. Instead, the bravest among them are limited to staying silent in the face of foolish celebrations. Others, more attuned to the public pulse will advertise specious improvement in rankings as the real thing; further eroding any effort to focus on what the institution needs to do to get better. Of course, if a highly visible ranking declines, then administrators will explain in excruciating detail why methodological issues related to the ranking render the institution's declining position an irrelevancy.

Such behavior is inevitable in the competitive college and university industry. The ferocious competition for the money that buys high quality students and superior research faculty mandates both serious comparisons of performance and publicity driven self-promotion by institutions. This competition is the real issue that underlies all of the rankings business, whether academic, free, and accessible versions such as this one or complex, statistically elaborate, closed, for-profit enterprise such as *US News*.

Acknowledgements

This edition of the *Top American Research Universities*, as has been the case since the beginning of this project, owes much to a generous gift by Mr. Lewis Schott to the University of Florida. This support provided the seed funding and continues to sustain various elements of our work. The University of Florida continues to support this project through the private funding provided by Mr. Schott and others. We are also grateful for the significant assistance in the preparation and publication of *The Top American Research Universities* from Arizona State University that host's The Center and one of its co-directors. We appreciate as well the assistance of the Louisiana State University System that allows the other co-director to continue to participate. Various colleagues have made contributions to the work of The Center over the past year and we are grateful to Lynne Collis, Diane Craig, and Ned Ruggeri for their commitment. As always, we appreciate and rely on the advice and counsel provided by our Advisory Board.

Elizabeth D. Capaldi

John V. Lombardi

December 2008

Part I – The Top American Research Universities

The Center for Measuring University Performance determines the Top American Research Universities by their rank on nine different measures: Total Research, Federal Research, Endowment Assets, Annual Giving, National Academy Members, Faculty Awards, Doctorates Granted, Postdoctoral Appointees, and SAT/ACT range. (The Source Notes section of this study provides detailed information on each of the nine indicators.) The tables group research institutions according to how many times they rank in the top 25 on each of these nine measures. The top category includes those universities that rank in the top 25 on all nine indicators. The bottom category includes universities with only one of the nine measures ranked in the top 25. Within these groups, institutions are then sorted by how many times they rank between 26 and 50 on the nine performance variables, with ties listed alphabetically. A similar methodology produces a second set of institutions—those ranked 26 through 50 on the same nine measures.

For the purpose of this study, *The Center for Measuring University Performance* includes only those institutions that had at least \$40 million in federal research expenditures in fiscal year 2006. This is a new threshold which replaced our previous \$20 million cutoff. There were 156 institutions who met our criteria for fiscal year 2006, 108 public and 48 private.

The first two tables list each institution with the most current data available for each measure and its corresponding national rank (i.e., rank among all institutions regardless of whether they are privately or publicly controlled). The other tables provide the same nine data measures but with the groupings determined by the control rank (i.e., rank among all private or all public institutions). Institutions ranking in the top 25 on at least one measure are included in the tables with the (1-25) identifier, while those ranking 26 through 50 are found in the tables labeled with the (26-50) header.

- **The Top American Research Universities (1-25)** identifies the 54 institutions (28 private, 26 public) that rank in the top 25 nationally on at least one of the nine measures.

- **The Top American Research Universities (26-50)** identifies the 31 institutions (8 private, 23 public) that rank 26 through 50 nationally on at least one of the nine measures.
- **The Top Private Research Universities (1-25)** identifies the 36 private institutions that rank in the top 25 among all private universities on at least one of the nine measures.
- **The Top Private Research Universities (26-50)** identifies the 12 private institutions that rank 26 through 50 among their private counterparts on at least one of the nine measures.
- **The Top Public Research Universities (1-25)** identifies the 44 public institutions that rank in the top 25 among all public universities on at least one of the nine measures.
- **The Top Public Research Universities (26-50)** identifies the 41 public institutions that rank 26 through 50 among their public counterparts on at least one of the nine measures.

Many research universities rank highly both nationally and among their public or private peers, and therefore appear in more than one table. For example, of the 36 private institutions in the Top Private Research Universities (1-25) table, 28 universities also appear in the Top American Research Universities (1-25) table.

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with prior years' top universities, in Microsoft Excel spreadsheets on its web site [<http://mup.asu.edu>].

Part II – The Center for Measuring University Performance – *Research Universities*

The Center for Measuring University Performance's research universities consist of academic institutions that had more than \$40 million in federal research expenditures in fiscal year 2006. In the following tables, institutions are listed alphabetically with the most current data available on each measure and their rank on each measure for each year. *The Center for Measuring University Performance* provides both the national rank (rank among all universities) and the control rank (rank within private or public universities). We include five years of data for each measure, which correspond to the same data years used in each of the five prior The Top American Research Universities reports. In addition to the nine performance variables presented in Part I tables, these tables also include other institutional characteristics related to student enrollment, medical schools, land grant status, ownership, research focus, and National Merit and National Achievement Scholars. The Source Notes section of this report provides detailed information on each data element. Tables in this section include the following:

- **Total Research Expenditures** (2002-2006)
- **Federal Research Expenditures** (2002-2006)
- **Research by Major Discipline** (2006)
- **Endowment Assets** (2003-2007)
- **Annual Giving** (2003-2007)
- **National Academy Membership** (2003-2007)
- **Faculty Awards** (2003-2007)
- **Doctorates Awarded** (2003-2007)
- **Postdoctoral Appointees** (2002-2006)
- **SAT Scores** (2002-2006)
- **National Merit and Achievement Scholars** (2003-2007)
- **Change: Research** presents trend data on total, federal, and non-federal research (1997 and 2006) in constant dollars.
- **Change: Private Support and Doctorates** provides trend data on endowment assets (1998 and 2007) and annual giving (1998 and 2007) in constant dollars, and doctorates awarded (1998 and 2007).
- **Change: Students** includes trend data on SAT/ACT ranges (1998 and 2006), National Merit and Achievement Scholars (2002 and 2007), and student headcount enrollment (1997 and 2006).
- **Institutional Characteristics** includes state location, highest degree offered, medical school and land grant status, federal research focus (summary of federal research by discipline), and total student enrollment.
- **Student Characteristics** provides headcount enrollment data broken out by level (i.e., undergraduate, graduate, first-professional), part-time enrollment by level, and degrees awarded.
- **The Center for Measuring University Performance Measures** presents the number of times a university ranks in the top 25 (or 26-50) on the nine quality measures in this year's report as compared to the past six years (2003-2008 reports).

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure, if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The prior years' data or ranks may differ slightly from our last report due to revised figures or estimates from the data source or institution.

The Center for Measuring University Performance's web site [<http://mup.asu.edu>] provides these same tables in Microsoft Excel spreadsheets for ease of analysis. In addition to the over-\$40-million group, the on-line tables contain data on all institutions reporting any federal research since 1990.

Part III – The Top 200 Institutions

The following tables list the top 200 universities and colleges on each of the nine performance measures, along with National Merit and Achievement Scholars. (The Source Notes section provides detailed information on each of the 10 data elements.) Unlike the previous tables in Parts I and II, this section includes data for all academic institutions regardless of their federal research activity level.

The Center for Measuring University Performance provides each institution's rank nationally among all universities as well as its rank by institutional control (i.e., rank among private or public peers). In cases where several institutions tie for last place, we use a different cutoff point. For National Academy members, we list all institutions with at least one National Academy member among their faculty. Tables in this section include:

- **2006 Total Research Expenditures**
- **2006 Federal Research Expenditures**
- **2007 Endowment Assets**
- **2007 Annual Giving**
- **2007 National Academy Membership**
- **2007 Faculty Awards**
- **2007 Doctorates Granted**
- **2006 Postdoctoral Appointees**
- **2006 SAT Scores**
- **2007 National Merit and Achievement Scholars**

Data found in these tables may not always match the figures published by the original source. *The Center for Measuring University Performance* makes adjustments, when necessary, to ensure that the data reflect the activity at a single campus rather than that of a multiple-campus institution or state university system. When data are missing from the original source, *The Center for Measuring University Performance* may substitute another figure if available. A full discussion of this subject, and the various adjustments or substitutions made to the original data, is in the Data Notes section of this report.

The Center for Measuring University Performance presents these tables, along with the prior years' top 200, as Microsoft Excel spreadsheets on-line at [<http://mup.asu.edu>].

The Top 200 Institutions – Total Research Expenditures (2006)

Top 1-50 Institutions in Total Research Expenditures	Total Research x \$1000	National Rank	Control Rank	Institutional Control
Johns Hopkins University	1,499,977	1	1	Private
University of Wisconsin - Madison	831,895	2	1	Public
University of California - Los Angeles	811,493	3	2	Public
University of Michigan - Ann Arbor	800,488	4	3	Public

Source Notes

The Center Measures

Total Research Expenditures

Federal Research Expenditures

Source: NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2005.

Each year, the National Science Foundation (NSF) collects data from hundreds of academic institutions on expenditures for research and development in science and engineering fields and classifies them by source of funds (e.g., federal government, state and local government, industry, etc.). These data are the primary source of information on academic research and development (R&D) expenditures in the United States. Included in this survey are all activities specifically organized to produce research outcomes that are separately budgeted and accounted for. This “organized research” may be funded by an external agency or organization (“sponsored research”) or by a separately budgeted organizational unit within the institution (“university research”). This report excludes activities sponsored by external agencies that involve instruction, training (except training in research techniques, which is considered organized research), and health service, community service or extension service projects.

All Federally Funded Research Labs (FFRLs) are excluded from these academic expenditures data, including the following: Jet Propulsion Laboratory (California Institute of Technology); Los Alamos National Lab, Lawrence Livermore Lab, Lawrence Berkeley Lab (University of California); Software Engineering Institute (Carnegie Mellon); Argonne National Laboratory (University of Chicago); National Astronomy and Ionospheric Center (Cornell); Ames Laboratory (Iowa State University); Lincoln Laboratory (MIT); Plasma Physics Lab (Princeton); and Linear Accelerator Center (Stanford). The NSF data no longer classify the Applied Physics Lab (APL) at Johns Hopkins as an FFRL, but federal funds support the vast majority of research conducted there. The APL makes up nearly one-half of Johns Hopkins’ total R&D expenditures and 53 percent of its federal R&D expenditures.

While inconsistencies in reporting (known and unknown) do exist here, as in any survey of this type, problems arise mostly when one breaks out the data by source of funds. NSF expects institutions to use year-end accounting records to complete this report, and there are nationally recognized accounting guidelines for higher education institutions. However, there are also countless variations in institutional policy that determine whether the university reports a particular expenditure as coming from one source or another, or possibly not counted at all. Take federal formula funds for agriculture (e.g., Hatch-McIntire, Smith-Lever) as an example. We conducted an informal survey of the appropriate institutions in the Association of American Universities (AAU) and found that two out of eleven land grants did not include any of these federal funds in their 1997 NSF data, while others included all or some of these monies. Because these funds make

up a very small percentage of the total research expenditures in any given year, the impact on our total research rankings is slight. The agriculture formula funds will have a somewhat greater, but still small, impact on the federal research rankings. NSF notes, “An increasing number of institutions have linkages with industry and foundations via subcontracts, thus complicating the identification of funding source. In addition, institutional policy may determine whether unrestricted state support is reported as state or as institutional funds.”¹

We believe that the reporting inconsistencies in the data are relatively minor when using the total research expenditures and the federal research expenditures component. Federal and state government audits of institutional accounting make deceptive practices highly unlikely, even though these entities do not audit the NSF data directly. NSF goes to great lengths to verify the accuracy of the data, especially federal expenditure data—checking them against several other federal agencies that collect the same or similar information. In fact, all major federal agencies and their subdivisions submit data to NSF identifying research obligations to universities each year. Historically, the NSF data have tracked very closely the data reported by universities.² Further, for their National Patterns of R&D Resources series, NSF prefers to use the figures reported by the performers of the work (that is, academic institutions, industry, nonprofits) because they believe that the performers are in the best position to accurately report these expenditures.

In some sections of this report, these expenditure data are deflated to constant 1983 dollars to show real change over time. While NSF uses the Gross Domestic Price (GDP) implicit price deflator in its reports on federal trends in research, we use the Higher Education Price Index (HEPI) because of its narrower focus. Developed by Research Associates of Washington, the HEPI illustrates the effect of inflation on college and university operations.³ In contrast, the GDP implicit price deflator is based on change in the entire U.S. economy and, as noted by NSF itself, “[its] use more accurately reflects an ‘opportunity cost’ criterion [i.e., the value of R&D in terms of the amount of other goods and services that could have been spent with the same amount of money], rather than a measure of cost changes of doing research.”⁴

The research trend data always reflect the most recent published data available because NSF allows institutions to submit revised figures for up to two years. Each year, NSF reports data for the current year as well as for the previous seven years. Specifically, we use the 2006 Survey data for fiscal years (FYs) 2005-06, the 2005 Survey for FYs 1998-2004 data, and the 2004 Survey for FY 1997 data. NSF’s published nationwide totals for academic R&D expenditures will not always match the corresponding totals in this study due to NSF’s sampling procedures for smaller or non-reporting institutions. In some years, rather than identifying the institutions individually, NSF provides one aggregate figure for all sampled institutions.

Endowment Assets

Source: NACUBO Endowment Study as reported in the Chronicle of Higher Education, endowment market value as of June 30, 2007.

Institutions report the market value of their endowment assets as of June 30 to three different sources, and they quite often use three different values. For this project, we use the National Association of College and University Business Officers (NACUBO) Endowment Study because of NACUBO's long history of reporting endowments of higher education institutions, their emphasis on using audited financial statements, and their focus on net assets (i.e., includes returns on investments and excludes investment fees and other withdrawals). NACUBO conducts its study annually and reports the results each February in the Chronicle of Higher Education.

Another source for endowment assets is the Council for Aid to Education's (CAE) annual Voluntary Support of Education (VSE) survey, cosponsored by the Council for Advancement and Support of Education (CASE) and the National Association of Independent Schools. The VSE survey is useful as a secondary resource because it provides more single-campus data than the other two sources. For those institutions that report a system-wide total to NACUBO, we often use the VSE data to calculate a campus' percentage contribution to the entire system, applying that factor to the NACUBO figure. In other cases, we may substitute the VSE figure when the institution indicates that this is a good data source.

The National Center for Education Statistics (NCES) Integrated Postsecondary Education Data System (IPEDS) Finance Survey also collects information on endowment assets, but these figures are often much lower than the two other sources and also are available much later. Although IPEDS instructions say to report endowment assets for "the institution and any of its foundations or affiliated organizations," it appears that not all institutions do so.

The fact that the NACUBO study requests net assets, while IPEDS and the VSE survey request gross assets, cannot explain the large differences found in some cases. In calling various institutions, we found it very difficult to determine exactly why the numbers vary so greatly. Oftentimes, two or more individuals at an institution independently report figures for these three reports with no clear understanding of how or why the numbers differ. An examination of the 1997 endowment figures provided by these institutions showed only one university (University of North Carolina at Chapel Hill) that submitted the same figure to each of the three organizations. We discovered no consistent pattern to explain reporting variations among the institutions. This area definitely warrants more study.

Annual Giving

Source: Council for Aid to Education's Voluntary Support of Education (VSE) Survey, FY 2007.

The Council for Aid to Education (CAE), an independent subsidiary of RAND, has produced the Voluntary Support of Education (VSE) Survey since 1986. The annual giving data include all contributions actually received during the institution's fiscal year in the form of cash, securities, company products, and other property from alumni, non-alumni individuals, corporations, foundations, religious organizations, and other groups. Not included in the totals are public funds, earnings on investments held by the institution, and unfulfilled pledges.

CAE's VSE Data Miner service, available on-line, provides 10 years of data for all participating institutions (more than 1,600 universities and colleges). Although this is a subscription-based service and requires a user ID and password, limited access is available on-line at [<http://www.cae.org/vse>].

National Academy Members

Source: National Academy of Sciences, National Academy of Engineering, and Institute of Medicine membership directories for 2007.

One of the highest honors that academic faculty can receive is membership in the National Academy of Sciences (NAS), the National Academy of Engineering (NAE), or the Institute of Medicine (IOM). All three are private, nonprofit organizations and serve as advisors to the federal government on science, technology, and medicine. Nominated and voted on by active members, newly elected members of these organizations receive life terms. Individuals elected to membership come from all sectors—academia, industry, government, and not-for-profit agencies or organizations. Member election dates are in February (NAE), April (NAS), and October (IOM).

The data collected for these rankings use active or emeritus members at their affiliated work institution, as reported in the on-line membership directories. In all cases, we were able to determine the specific campus for individual members. We re-check institutional affiliation annually to account for established members who have changed employers or whose membership is no longer active.

Faculty Awards in the Arts, Humanities, Science, Engineering, and Health

Source: Directories or web-based listings for multiple agencies or organizations.

For this category, we collect data from several prominent grant and fellowship programs in the arts, humanities, science,

engineering, and health fields. Included in this measure are:

- American Council of Learned Societies (ACLS) Fellows, 2007
- Beckman Young Investigators, 2007
- Burroughs Wellcome Fund Career Awards, 2007
- Cottrell Scholars, 2007
- Fulbright American Scholars, 2007-08
- Getty Scholars in Residence, 2007-08
- Guggenheim Fellows, 2007
- Howard Hughes Medical Institute Investigators, 2007
- Lasker Medical Research Awards, 2007
- MacArthur Foundation Fellows, 2007
- Andrew W. Mellon Foundation Distinguished Achievement Awards, 2007
- National Endowment for the Humanities (NEH) Fellows, 2008
- National Humanities Center Fellows, 2007-08
- National Institutes of Health (NIH) MERIT (R37) FY 2007
- National Medal of Science and National Medal of Technology, 2006
- NSF CAREER awards (excluding those who are also PECASE winners), 2007
- Newberry Library Long-term Fellows, 2007-08
- Pew Scholars in Biomedicine, 2007
- Presidential Early Career Awards for Scientists and Engineers (PECASE), 2007
- Robert Wood Johnson Policy Fellows, 2007-08
- Searle Scholars, 2007
- Sloan Research Fellows, 2007
- Woodrow Wilson Fellows, 2007-08

While the vast majority of these programs clearly identify a particular campus, in a few instances we used the institution's web-based phone directory to determine the correct campus.

Doctorates Awarded

Source: NCES IPEDS Completions Survey, doctoral degrees awarded between July 1, 2006, and June 30, 2007.

Each year, universities report their degrees awarded to the NCES in the IPEDS Completions Survey. IPEDS provides straightforward instructions for reporting doctoral degrees awarded, and we do not find any inconsistencies in reporting

among the universities included in our rankings. IPEDS asks each institution to identify the number of Doctor of Education, Doctor of Juridical Science, Doctor of Public Health, and Doctor of Philosophy degrees awarded between July 1 and June 30.

Most institutions in our study submit degree data by campus or offer doctoral degrees solely or primarily at the main campus.

In addition to doctorate degrees, The Center presents degrees awarded at other levels—associate's, bachelor's, master's, and professional degrees—in the Student Characteristics table.

Postdoctoral Appointees

Source: NSF/Division of Science Resource Statistics (SRS) Survey of Graduate Students and Postdoctorates in Science and Engineering, Fall 2006.

Each year, NSF and NIH collect data from all institutions offering graduate programs in any science, engineering, or health field. The Survey of Graduate Students and Postdoctorates in Science and Engineering (also called the Graduate Student Survey or GSS) reflects graduate enrollment and postdoctoral employment at the beginning of the academic year. Postdoctorates are defined in the GSS as “individuals with science and engineering PhD's, MD's, DDS's or DVM's and foreign degrees equivalent to U.S. doctorates who devote their primary effort to their own research training through research activities or study in the department under temporary appointments carrying no academic rank.” The definition excludes clinical fellows and those in medical residency training programs unless the primary purpose of their appointment is for research training under a senior mentor.

In the methodological notes for this survey,⁵ NSF indicates that it verifies the data with the institutional coordinator when dramatic year-to-year fluctuations are noted. In addition, in this data set, it is unclear whether an institution has actually reported zero postdocs or NSF has simply assigned a zero for non-response (rather than imputing by using prior-year or peer data, as described in NSF methodological notes). This year, in cases where we suspect it is not a true zero, we left the field blank.

Although each doctorate-granting campus submits data separately, NSF often aggregates them in its published reports. In all cases, we obtain the single-campus data for these schools directly from NSF.

SAT Scores

Source: NCES IPEDS Survey, SAT and ACT scores for Fall 2006.

IPEDS reports the 25th and 75th percentiles for verbal and quantitative SAT I scores for most institutions in our study. For our measure, we calculated the median of that range. Some institutions report the ACT instead of the SAT to IPEDS and some

report both. We selected the test which has the greatest percentage of students reporting. To convert ACT scores scores, we use a conversion table provided by The College Board to generate a comparable SAT equivalent score. When an institution submits neither an SAT nor ACT score, we substitute data from other national data sources.

Other Measures of Undergraduate Quality

National Merit and Achievement Scholars

Source: The 2006-07 National Merit Scholarship Corporation Annual Report, which reflects the 2007 freshman class.

The National Merit Scholarship Corporation (NMSC) is an independent, nonprofit organization that awards scholarships to the nation's outstanding high school seniors based on their academic achievement, qualifying test scores, high school principal and counselor recommendations, and their activities, interests, and goals. The NMSC names approximately 16,000 National Merit Finalists each February. Of these, about one-half will receive a National Merit \$2,500 Scholarship, a corporate-sponsored scholarship, or a college-sponsored scholarship.

National Achievement Scholars are selected and funded in a similar fashion and represent the nation's outstanding African-American students. Ideally, the National Hispanic Scholars Program should also be included in this category, but it does not track the enrollment of its scholarship winners. Should it do so in the future, we will include these students in The Center's data. In this study, Merit and Achievement scholarships are credited to the main campus if the NMSC Annual Report does not indicate a branch campus.

While the number of National Merit and National Achievement award winners in the entering class provides an indication of the attractiveness of a university's undergraduate program to outstanding students, it is also an indicator that is sensitive to institutional policies on financial aid. Because the number of Merit Scholars is small, relatively small changes in institutional aid policies can have a significant impact on the number of National Merit Scholars enrolling in institutions. The average SAT score provides a broader-based and more reliable measure of overall undergraduate quality; for those reasons, we prefer the SAT scores to the number of National Merit and Achievement Scholars as an indicator of undergraduate quality.

Institutional Characteristics

Medical Schools

Source: NCES IPEDS Completions Survey, MD degrees awarded between July 1, 2006, and June 30, 2007.

Although the IPEDS Institutional Characteristics Survey does have a "medical" field that indicates whether an institution grants

a medical degree, we choose not to use its data because it includes medical degrees in Veterinary Medicine, Dentistry, and other professional health-related fields. For our measure, we determined whether a particular campus awarded any MD degrees during the academic year. If the institution did not submit any data to IPEDS for that year, we then looked at whether it was accredited by the American Medical Association to determine whether the institution has a medical school.

Land Grant Institutions

Source: National Association of State Universities and Land Grant Colleges.

The first Morrill Act in 1862 appropriated federal funds for universities to provide agricultural and technical education to their citizens. A second Morrill Act in 1890 expanded eligibility to include several historically black colleges and universities, and in 1994 several Native American tribal colleges were recognized as land grant institutions. Today, there is at least one land grant institution in each state and U.S. territory and in the District of Columbia. Of the 105 institutions, most are public universities. Federal land grant institutions receive both federal and state dollars in support of their agricultural and extension activities.

While land grant status technically applies to some university systems, such as the University of California and the University of Nebraska, for our study we designate as land grant institutions only those schools that actually perform that function (e.g., UC-Berkeley, UC-Davis, UC-Riverside, Nebraska-Lincoln). In these cases, the land grant field will identify whether an institution is part of a system-wide land grant and whether the vast majority of the activity occurs on that campus. For example, UC-Davis is coded as "Yes-System" while UCLA is coded as "No-System." We consider the 1890 institutions as land grant institutions, but we identify them separately because they do not perform extension activities.

Research Focus

NSF/SRS Survey of R&D Expenditures at Universities and Colleges, FY 2006.

In addition to reporting expenditure data by source of funds, NSF identifies in what major disciplines the money is expended. In the Research by Discipline table we provide the proportion of total and federal expenditures in each discipline for those institutions with more than \$40 million in federal research. These data are useful for developing groups of similar institutions for peer analysis.

The Institutional Characteristics table provides a summary measure of an institution's research strength and concentration based on these discipline-level expenditures. Universities with 95-100% of their federal research dollars spent in one particular

discipline are coded as “all.” We identify institutions with 75-94% in one area as “heavy” and label those with 50-74% of their expenditures concentrated as “strong.” Other universities with 25-49% in one or more disciplines we describe as “moderate.” A few institutions (but none in the more than \$20 million group) have expenditures distributed fairly evenly across the disciplines; those we code as “mixed.”

In some cases, where an institution reports as a multi-campus entity, we made adjustments to break out the discipline-level expenditure data by single campus. Typically, this involved moving all or a portion of the life sciences expenditures to the health or medical center campus. IPEDS fall enrollment and graduate degrees by discipline data also were used to help in this effort.

While these data offer some insight as to the research structure of a university, their usefulness is limited. For example, we may be tempted to use the life sciences as a surrogate for medical research, but we must remember that they also include agricultural and biological sciences. Further, the growing trend toward multidisciplinary and interdisciplinary projects may make it more difficult for universities to accurately reflect expenditures by discipline or sub-discipline. The Center chooses not to break out these sub-disciplines because the data are increasingly prone to error as further adjustments are made.

Student Characteristics

Fall Enrollment

Source: NCES IPEDS Fall Enrollment Survey, 2006.

Each November, institutions report their current fall headcount enrollment to the IPEDS Fall Enrollment Survey. Enrollment figures include both degree seeking and non-degree seeking students. The Center provides the headcount enrollment by level as presented by IPEDS, along with the percentage of those attending part-time. Graduate students include those seeking specialist degrees in engineering and education. First professional students

include those seeking degrees in medical fields, such as Chiropractic, Dentistry, Medicine, Optometry, Osteopathic Medicine, Pharmacy, Podiatry, and Veterinary Medicine, as well as those seeking degrees in Law and Theology.

Each campus in our study submits enrollment data by campus, except for the few institutions identified in our Data Notes section. Because this is an informational item and not one of The Center’s nine quality measures, we did not attempt to adjust these figures.

AAMC Federal Research

Source: Association of American Medical Colleges

The Association of American Medical Colleges data on federally sponsored research at medical colleges through the Liaison Committee on Medical Education (LCME) Part I-A, Annual Financial Questionnaire. We calculate each medical school’s federal R&D by summing the recorded dollars and a portion of the relative administrative costs. We exclude the not-recorded dollars.

Data Notes

The raw data used for *The Top American Research Universities* project—obtained from federal agencies and national organizations—often contain information on single-campus institutions, multiple-campus institutions, and state university systems, without clearly identifying the distinctions. This makes national comparisons difficult and unreliable.

To increase the validity and usefulness of these data, *The Center* adjusts the original reported figures, when necessary, to ensure that all data represent the strength of a single-campus institution. *The Center* bases its adjustments on information gathered from the reporting agency or from the university itself. In cases where the published data represent a single campus, we do not adjust the data. When the data represent more than one campus, we first attempt to obtain a figure directly from the National Science Foundation (NSF) (for research expenditures and post-doctorates), from the institution itself, or from the university system office that submitted the data. If unavailable from those primary sources, we use an estimated or substitute figure derived from information found on the institution's web site. As a last resort, we use prior-year data as a substitute.

If the institution provides an estimate representing at least 97% of the originally published figure, we credit the full amount to the main campus. Otherwise, we use the estimate provided by the institution.

The Center does not adjust the private university data because of multi-campus or system-wide reporting. We treat all private universities in this study as single-campus institutions because, while some may have multiple campuses, they are generally in or around a single city and considered an integral part of the main campus. Furthermore, private institutions generally do not break out their data by regional, branch, or affiliated campus as often happens with public institutions.

The following tables outline the various adjustments or substitutions that we made to the original data. The tables list institutions alphabetically and include both private and public universities. For the purpose of this report, we provide notes for institutions with more than \$40 million in fiscal year 2006 federal research. Data notes for all other research universities are available on *The Center* web site [<http://mup.asu.edu>].

2007 Endowment Assets (NACUBO)	15,613,672	405,177	Data provided by institution in 2007.
University of Texas MD Anderson Cancer Center			
2007 Endowment Assets (NACUBO)	15,613,672	564,505	Data provided by institution in 2007.
University of Texas Medical Branch - Galveston			
2007 Endowment Assets (NACUBO)	15,613,672	496,876	Data provided by institution in 2007.
University of Texas SW Medical Center - Dallas			
2007 Endowment Assets (NACUBO)	15,613,672	1,434,560	Data provided by institution in 2007.
University of Washington - Seattle			
2006 Total Research Expenditures (NSF)	778,148	778,148	Estimate at least 97% is main campus, per institution. All dollars credited to main campus.
2006 Federal Research Expenditures (NSF)	650,394	650,394	Estimate at least 97% is main campus, per institution. All dollars credited to main campus.
Washington State University - Pullman			
2006 Total Research Expenditures (NSF)	196,391	196,391	Estimate at least 97% is main campus, per institution. All dollars credited to main campus.
2006 Federal Research Expenditures (NSF)	81,324	81,324	Estimate at least 97% is main campus, per institution. All dollars credited to main campus.
2007 Endowment Assets (NACUBO)	650,903	650,903	Estimate at least 97% per institution.
2007 Annual Giving (CAE VSE Survey)	63,127	59,907	Estimate 94.9% per institution.

The Center for Measuring University Performance Advisory Board

Arthur M. Cohen

Professor Emeritus
Division of Higher Education
Graduate School of Education and Information Studies
University of California, Los Angeles

Larry Goldstein

President, Campus Strategies
Consultant, NACUBO

Gerardo M. Gonzalez

University Dean, School of Education
Indiana University

Roger Kaufman

Professor Emeritus, Educational Psychology and Learning
Florida State University
Director, Roger Kaufman & Associates
Distinguished Research Professor
Sonora Institute of Technology

Gordon C. Winston

Orrin Sage Professor of Political Economy, Emeritus
Director, Williams Project on the Economics of
Higher Education
Williams College
